

Cloud Benefits.

Paragon Private Cloud Hosting
Solutions Overview

PARAGON

Infrastructure That Supports Your Growth.

10 benefits of cloud.

Why should my business look at cloud hosting as an IT solution?

Secure infrastructure – Much more secure than a data center located in a business office.

Budgeted monthly cost - Avoid capital outlay for hardware and reduce operational costs for software patches, upgrades, and maintenance.

Avoid downtime worries - Keep your data secure and available - 24/7/365

Speed to market - By cloud enabling your IT platforms end users can design, build and manage their own projects improving speed to market and deliver benefits back to the business faster.

Allocate internal IT resources and budgets toward revenue-generating projects rather than standing up and maintaining technology infrastructure.

Flexibility and scalability – Computing power, network resources and data storage can be scaled by your IT department or the end users to match changes in their business needs.

Reduced risk – One supplier on a single contract gives the simplicity of one point of contact, while deploying new applications becomes more predictable and straightforward.

Lower total cost of ownership – reducing complexity and management of IT infrastructure can help lower total cost of ownership by up to 40 per cent.

IT agility - Cloud enabling your IT infrastructure (private cloud) can save you time with new platforms built in hours rather than weeks enabling you to realize costs savings and revenue opportunities much quicker.

Greener by design – exploiting the latest technology means more environmental efficiency and a lower carbon footprint. Saves you significant electricity you endure in a business centered data center.

Cloud delivery.

Unprecedented speed to market.

The background of the slide shows an office environment with a wooden desk, a black office chair, and a window with a grid pattern. A large, white, stylized cloud graphic is overlaid on the left side of the image, partially obscuring the office scene.

10 advantages of Paragon.

What sets Paragon Private Cloud Hosted Solutions apart from others?

SD WAN integration

into the Paragon Private Cloud with Talari – Paragon has a very unique ability to integrate and blend SD WAN and Talari infrastructure with our private cloud to improve your bandwidth and business continuity experience at your remote locations.

This also gives you unprecedented speed to market options when business needs require expansion to new locations as well as integration with your business partner's network and security.

Customized with ease of management

With VMware vCloud technology, Paragon has designed its data center solution with customization in mind.

Our flexible cloud delivery allows our customers the ability to provision their own solutions and in a pay-as-you-go model without the burden or costs of over provisioning. As well, you have the benefit and ability to lower licensing costs by only paying for the systems and environments you use and turn down the ones you don't.

You have the freedom to configure your solution around your business needs with Paragon on hand to offer technical advice and support for you to get the very most from the platform.

Cloud support.

24/7 top level service and support.

VoIP Phone Solution Options

Paragon has a variety of hosted and premise based solutions to meet your needs. Whether it be hosted in our private cloud along with your other applications or a 3rd party hosted or Premise solution, Paragon leads the way in voice solution options for your upcoming needs. Because of our deep Voice Solutions background, one of our core strengths is the design, roll out, and support of voice solutions for customers like you. The end to end responsibility from data to voice will enable us to fully integrate and support your entire infrastructure.

Connectivity

Available on-network fiber connections provide private connectivity, security, and high speed connectivity. Paragon uses multiple carrier internet blending for high reliability and access.

Comprehensive Security

Isolated and Dedicated- For organizations that demand total physical separation to meet company policy or industry regulations, the Paragon Private Cloud offers the perfect infrastructure foundation. Your solution is completely standalone and air-gapped from other platforms and located within our highly secure, data center. Networking, switching, compute, and storage layers are completely dedicated to your services and applications.

Service and Support

24/7 top level service and support- Years of experience in private cloud architecture.

Architecture

Fully architected, built, and supported by Paragon using the latest technology.
– Not resold or white labeled.

Scalable

Infrastructure that Supports Your Growth – Paragon private cloud infrastructure uses VMware virtualization software and management to leverage your dedicated resources in an incredibly efficient fashion, getting the maximum benefits for your services and applications from each piece of physical hardware.

As your business requirements change, additional resources can be added to any layer of your cloud platform with ease and zero downtime.

Financial

Based on the agreement you choose, pay for only what you use as long as you need it. You have the business benefits of control over resources and costs - Scaling up and down as needed.

Location

Local data centers with geo redundant locations.

Connectivity

Available on-network fiber connections provide private connectivity, security, and high speed connectivity. Paragon uses multiple carrier internet blending for high reliability and access.
